SUMMARY

Focused on AI engineering, building LLM-powered applications using AWS Bedrock, Strands, LangChain, and LangGraph, with an interest in multi-agent systems and RAG. Brings a strong frontend background in developing scalable, high-performance React applications.

EXPERIENCE

Mindstix Software Labs Aug 2024 – Present

Software Development Engineer 2 *Pune, India*

Agentic AI | AWS Bedrock AgentCore, Strands, LangGraph, Python, CloudWatch, OpenTelemetry, Grafana

- Developed LangGraph-based AgentCore workflows for InDesign deck generation from Salesforce and e-commerce data, combining deterministic processing with targeted LLM calls (Strands, Claude on Bedrock).
- Built validation gates, resilient data integrations (OAuth refresh, retries, image fallbacks), and runtime configuration bundles that allow configuration changes without redeployment.
- Enhanced an order-notes summarization agent with Bedrock Prompt Management, caching and fallback prompts, session reuse, multilingual support, and PII anonymization with audit events and CloudWatch monitoring.
- Built a Spring Boot SSE endpoint to stream AgentCore output and fixed HTTP/2 stream truncation by disabling proxy buffering.

Frontend | React, MUI, JavaScript, Jest, React Testing Library

- Built client-specific management features and workflows for an e-commerce platform using React.
- Built UI features for a B2B order-tracking application covering order details, inventory, notes, and banking information, across North America and global deployments.
- Built the agent invocation interface for an AI summarization system: multi-category selection, streaming responses, and multilingual support.

Techenece Aug 2023 – Jul 2024

Java Developer

- Developed a web-based ERP system to centralize business operations.
- Implemented backend business logic using Java and integrated SQL database operations for efficient data storage, retrieval, and management.
- Implemented CRUD operations, input validation, and database constraints to maintain data accuracy and consistency.

PROJECTS

Production Incident Root Cause Analysis Agent | AWS Bedrock, Python, AgentCore, LangChain, LangGraph, MongoDB 2026

An AI-powered platform to accelerate debugging and issue resolution by combining automated log analysis with code-level insights, enabling faster and more accurate root cause identification.

- Contributed to the design and implementation of a multi-agent orchestration framework to coordinate analysis workflows.
- Built the orchestration layer using Strands Agents, ensuring scalability and modularity.
- Configured AWS Bedrock AgentCore Gateway for MCP tool integration and implemented a GitHub-based analysis pipeline.
- Enabled real-time agent execution and monitoring through Server-Sent Events (SSE).

SKILLS

AI / LLM: AWS Bedrock, AgentCore, Strands Agents, LangChain, LangGraph, Prompt Engineering

Languages: Python, Java, JavaScript

Backend and Cloud: Spring Boot, MongoDB, AWS (S3, Secrets Manager, IAM, CloudWatch), OpenTelemetry, Grafana

Frontend: React, MUI, Jest, React Testing Library

EDUCATION

Smt. Kashibai Navale College of Engineering Pune, India

B.E. in Computer Engineering | CGPA: 9.56 / 10 *2019 – 2023*

Mahatma Gandhi Vidyalaya and Jr. College Pune, India

HSC (Class XII) | 77.85% *2019*

Mahatma Gandhi Vidyalaya Pune, India

SSC (Class X) | 92.60% *2017*

ACHIEVEMENTS

- Participated in the AI for Bharat Hackathon, powered by Amazon Web Services.
- University topper in Computer Engineering (CGPA 9.56/10), Smt. Kashibai Navale College of Engineering.
